Forecast for Thursday 20 May 2021

Weather: Generally dry through the overnight hours but becoming increasingly cloudy. Showery rain arriving soon after dawn and this becoming increasingly persistent through the morning, with heavy pulses at times. Becoming windy with southerly gales developing. Heavy and persistent rain continuing through the afternoon, somewhat more intermittent in the east, but unrelenting in the west. Remaining very windy with gales in many areas and severe gales at height. Staying wet and very windy into the evening with severe gales continuing.

Chance of cloud free mountain/hill tops above 800m: 50-60% first thing, falling to 40% through the morning and to 20% or less by the evening.

Visibility: Patches of cloud above 500m during the early hours, mainly in the south, but otherwise very good visibilities. Extensive periods of cloud above 700-800m developing through the morning, lowering to 500m at times on some south facing slopes. Some breaks to higher summits possible during the early afternoon in the north of the area, however extensive cloud above 500-600m persisting in the south and later west of the area and occasional periods above 700m elsewhere. Generally moderate to poor visibility through the afternoon with rain reducing visibility to a few kilometres in the valleys and very poor visibilities in the hill fog.

Meteorologist's View

Ferocious gusts of wind in excess of 70 mph are likely on many summits and ridges through the afternoon, with ridges such as Crib Goch susceptible of seeing wind gusts of over 80 mph at times. Winds of this strength will make walking extremely arduous and may result in one being blown over. Water run-off is likely on all paths and will give wet slippery rock surfaces, particularly hazardous on steep routes. Mountain streams are likely to quickly rise and spate. A significant wind chill will make it feel like it is well below freezing on the summits.

Forecast for Friday 21 May 2021

Weather: Severe gales on the summits slowly easing through the early hours but heavy rain continuing. Remaining very wet through the morning hours but winds continuing to slowly abate, although remaining strong. The rain may become more showery later in the afternoon, with perhaps some brightness by the evening.

Maximum wind: Southwesterly 45 mph gusting 65 mph during the early hours, easing to westerly 20-25 mph gusting 35-40 mph by early afternoon.

Chance of cloud free mountain/hill tops above 800m: 30%.

Visibility: Extensive cloud above 500-600m with occasional patches as low as 400m at times. Visibility will often be very poor at higher levels within the cloud, and even at lower levels rain will reduce visibilities to moderate at best.

Temperature: **Valleys:** Plus 8 Celsius rising to plus 13 Celsius.
At 800m: Plus 5 Celsius.
Freezing level: Above the summits.
